Question 1 | Correct Mark 1.00 out of 1.00

Convert the following algorithm into a program and find its time complexity using the counter method.

```
void function (int n)
{
    int i= 1;
```

```
    int s =1;
```

```
    while(s <= n)
    {
         i++;
         s += i;
     }
}
```

Note: No need of counter increment for declarations and scanf() and count variable printf() statements.

Input:

A positive Integer n

Output:

Print the value of the counter variable

For example:

Input	Result
9	12

Answer: (penalty regime: 0 %)

```
#include<stdio.h>
int main(){
    int n;
    int s=1,i=1,count=0;
    scanf("%d",&n);
    count++;
    count++;
    while(1){
        count++;
        if(s>n) break;
        i++;
        count++;
        s+=i;
        count++;
    }
    printf("%d",count);
    return 0;
}
```
